The PC-3000 UDMA is a variant of the PC-3000U which has only two SATA ports, so that the tester board uses the integrated controller for the storage functions. D-DSP The D-DSP is a digital signal processor (DSP) which is designed for the control of external testers as well as for audio functions. The DSP functions as a co-processor and is used for the digital control of the PC-3000 and the PC-3000U. The DSP can be used for the triggering of tester functions, the digital volume control as well as the data transfer. The D-DSP can be used for recording audio samples and for the conversion to text. If the PC-3000 is powered off, the PC-3000 software can start up in the background and transmit data via the D-DSP. It is possible to transfer the recorded data via modem and e-mail. D-RK-7 The D-RK-7 is a seven-channel audio multi-instrument. It is based on the Eurorack standard and can be used with the PC-3000 or PC-3000UDMA. It includes an FM synthesizer, a vocoder, a ring modulator and a polyphonic step sequencer with eight instrument slots. The D-RK-7 is available in three versions: the standard D-RK-7, the D-RK-7 UDMA and the D-RK-7 UDMA-5. The D-RK-7 and D-RK-7 UDMA have the same features and only differ in the output resolution. D-VOC-3 The D-VOC-3 is a 3-channel vocoder, which has 16 voice memory slots. It is based on the Eurorack standard and can be used with the PC-3000 or PC-3000UDMA. The D-VOC-3 is available in four versions: the D-VOC-3 standard, the D-VOC-3 UDMA, the D-VOC-3 UDMA-5 and the D-VOC-3 UDMA-6. D-VOC-5 The D-VOC-5 is a 5-channel vocoder. The function of the D-VOC-5 is identical to the D-VOC-3. The D-VOC-5 has 82157476af
